

HOSPITAL AT HOME

When a patient needs care, but not enough care to justify an extended inpatient stay, hospital systems are increasingly turning to Hospital at Home. The service provides high-quality hospital-level care in the homes of patients from nurses, doctors, and other medical professionals.

Here are some things to know about the service

WHO CAN USE HOSPITAL AT HOME?

Hospital at Home is not for everyone, but it can be used for **stable** patients with:

- **CONGESTIVE HEART FAILURE**
- **COPD**
- **CELLULITIS**
- **COMPLICATIONS FROM DIABETES**
- **PNEUMONIA**
- **COVID-19**

COVID-19

During the pandemic, some patients suffering from coronavirus, but not requiring ICU care, received their treatment at home.

The move freed up hospital beds for more serious cases and gave at-home patients a more comfortable place to recover.

BENEFITS OF HOSPITAL AT HOME

**LOWER MORTALITY RATES
AND FEWER READMISSIONS**

**FEWER LAB AND DIAGNOSTICS
TESTS**

**REDUCED PATIENT, FAMILY,
AND CAREGIVER STRESS**

**SHORTER CARE TIMES AND
BETTER OUTCOMES**

**SAVINGS BETWEEN 19-30%
COMPARED TO INPATIENT CARE**

**SAVES HOSPITAL BEDS FOR
PATIENTS WITH MORE SERIOUS
CONDITIONS**
